

EW SENTINEL

Operator Log

The EW Sentinel Operator Log is an Electronic Warfare Communications Monitoring and Security Logging System tailored for efficient information gathering. EW Sentinel controls receiver devices, records demodulated audio and allows the user to log and perform queries on information.

EW Sentinel allows operators to intercept and analyse communications events by monitoring specific frequencies, stepping through preset frequencies, or sweeping a frequency range to find activity.

The Operator Log has a straightforward and intuitive user interface, simplifying the complexity of controlling any receiver to just a few clicks. It maintains a common look and feel for receiver control and automatically adjusts the user interface to match the differences in receivers.

one-touch recording

automatic date-time / frequency stamping

| DateTime | Frequency | Call Signs | Log | Breaches |
|-------------------|-------------|--------------------------------------|---|-------------------------------|
| 09:48:12 27/09/04 | 1772.25 MHz | BRAVO rx CHARLIE tx | BRAVO TO CHARLIE WE MOVE TO ALPHA LOCATION AND INTERCEPT | Location 1 |
| 09:48:56 27/09/04 | 459.03 MHz | DELTA rx | WE HAVE A 249 IN PROGRESS CAN ANY UNITS IN THE LOCAL AREA OF 85TH AND 29TH REPORT TO DELTA | Entity 1 Location 1 |
| 09:52:23 27/09/04 | 1106.96 MHz | JOHN tx PETE rx | PETE WE HAVE A BUILDING ON FIRE ON MAIN ST & JOHN WILL BE THERE OVER | Location 1 VIP Movements 1 |

The one-touch logging function allows operators to enter information about intercepts quickly and easily, so they can maintain accuracy while gathering large amounts of information in a cluttered environment.

One-touch recording with variable playback speed allows operators time to decipher difficult to understand intercepts. Recorded samples are stored in a central database and dynamically uploaded to operator terminals as required.

variable playback speed

- audio buffering allows one-touch recording of suspicious intercepts
- automatic date-time and frequency stamping of recorded intercepts
- callsigns, breaches and breach types added quickly and easily
- looped / variable playback speed for difficult to understand intercepts
- configurable hotkeys to control all functionality
